

Connected Rodent

Our connected solutions are science-proven and provide 24/7 pest detection, ensuring reliable, evidence-based treatment.

We risk-assess your property to create a solution that is tailored to provide the most effective protection.

Reducing business disruptions ▪ Maximising brand protection
Optimising healthy, safe environments

Innovative technology

Connected Rodent

Ecolab Pest Intelligence provides scientifically proven, risk assessed pest solutions. Within these solutions our rodent offering is called **Connected Rodent**. This service offers 24/7 monitoring all day, every day to ensure less pest activity.

Connecting your need to the right solution

We have two unique Connected Rodent systems. Depending on the demands of your business, these systems can be deployed in isolation or as a blended solution.

Onsite

- Onsite utilises Bluetooth technology to connect the devices with Ecolab systems.
- Activity captured by Onsite is securely transferred when Service Specialists visit your site by activating our Pest Service App.
- Data received on this App notifying of activity is then available to the Service Specialist for action and is also available to you through MyEcolab and your Service Reports.
- This all happens independently without interacting with your wifi network.

Real-Time

- Real-Time uses LORA technology, which forms a long range, wide area, wireless network to create a connected web of devices that link to a central hub located on your site.
- Data received notifying activity is instantly encrypted and securely transferred to Ecolab, for action, though a mobile signal.
- Service Specialists visit site following notification and utilise the data captured to create effective and efficient treatment strategies to minimise business disruption.
- Activity data and Service Reports are available to you through MyEcolab.
- This all happens independently without interacting with your wifi network.

Connected Rodent	Onsite	Real-Time
24/7 Alert of activity		✓
Immediate Service Specialist response to site		✓
24/7 Monitoring of activity	✓	✓
Coverage of hard-to-reach areas, such as ceiling voids, wall cavity, sub-floor	✓	✓
Identification of vulnerability areas	✓	✓
Minimised business disruption	✓	✓
Early detection of pest activity	✓	✓
Informed treatment strategy	✓	✓
Accurate remediation strategy	✓	✓
Can be used externally	✓	
Uses Ecolab platform to connect	✓	✓
