SUMMARY OF PRODUCT CHARACTERISTICS

Chlorhexidine Gluconate Mouthwash - Original Flavour
Chlorhexidine Gluconate Mouthwash - Peppermint Flavour

Name of Medicinal Product: Chlorhexidine Gluconate Antiseptic Mouthwash 0.2% w/v.
Indications: Chlorhexidine Gluconate Antiseptic Mouthwash is an antiseptic solution which inhibits the formation of dental plaque. It is indicated as an aid to the treatment and prevention of gingivitis and in the maintenance of oral hygiene, particularly in situations where tooth brushing cannot be adequately employed (e.g. following oral surgery or in physically handicapped patients). It is used to promote gingival healing following periodontal surgery, to manage recurrent oral ulceration. Additionally it is useful in the treatment of denture stomatitis and thrush. Undesirable effects:

Immune disorders; Frequency: not known - allergy skin reactions, maculopapular rashes, pruritus, angioedema, anaphylactic shock; Generalised allergic reactions and anaphylactic shock. The prevalence of chlorhexidine hypersensitivity is not known, but available literature suggests this is unlikely to be very rare. Chlorhexidine Gluconate Antiseptic Mouthwash should not be administered to anyone with a potential history of an allergic reaction to a chlorhexidine-containing compound. For oral use only. Keep away from the eyes and ears. If solution comes into contact with the eyes, wash out well with water. Keep out of the reach and sight of children. Petrolatum 4R may cause allergic reactions. Macrogol glycerol hydroxystearate may cause skin reactions.

Warning: Chlorhexidine Gluconate Antiseptic Mouthwash contains chlorhexidine. Chlorhexidine is known to induce hypersensitivity, including generalised allergic reactions and anaphylactic shock. The prevalence of chlorhexidine hypersensitivity is not known, but available literature suggests this is likely to be very rare. Chlorhexidine Gluconate Antiseptic Mouthwash should not be administered to anyone with a potential history of an allergic reaction to a chlorhexidine-containing compound. For oral use only. Keep away from the eyes and ears. If solution comes into contact with the eyes, wash out well with water. Keep out of the reach and sight of children. Petrolatum 4R may cause allergic reactions. Macrogol glycerol hydroxystearate may cause skin reactions. Petrolatum and lactated Ringers solution: chlorhexidine has been in widespread use for many years and no harmful effects in human pregnancy have been reported. However as with all drugs, caution should be exercised. Chlorhexidine Gluconate Antiseptic Mouthwash should be used only when the benefit to the mother has been assessed by a clinician.

Posology and method of administration: Children, adults and the elderly: Chlorhexidine Gluconate Antiseptic Mouthwash should be used as required up to twice daily. Rinse the mouth thoroughly for about 1 minute with 10 ml. Prior to dental surgery, the patient should be instructed to rinse the mouth with 10 ml for 1 minute. In the treatment of gingivitis a course of about one month is recommended (i.e. two bottles, for denture stomatitis cleanse and soak the denture in solution for 15 minutes twice daily. In the case of aphthous ulceration and oral candidal infections, treatment should be continued for 40 hours after clinical resolution.
